Earthquake procedure

Stay calm. A clear head is essential to following directions and making appropriate decisions. If you are indoors, do not go outside. Blowing and falling debris can be dangerous. Move away from all glass windows and doors so you will not be hit by glass if a window is broken by blowing debris. Move away from furniture that fall on you. If possible move to an interior corridor away from windows and doorways. If you are in your room, close your drapes, go to the bathroom, close the door behind you and get into the tub or shower. This area offers you the best protection. If there is an earthquake you can also take cover under a sturdy desk or table. Hold onto the furniture and be prepared to move as it moves. Stay there until the shaking stops.
